Coding Guide

Installation Setup

Here's the installation video link : https://youtu.be/-9B7gpuWVrY

Change splash & logo

Go to pubspec.yaml, which located at root project. For the logo I'm using this package https://pub.dev/packages/flutter_launcher_icons to change the logo, change the image_path:

```
83    # Specify your launcher icon here
84    # Then run the package in terminal
85    # flutter pub get
86    # flutter pub run flutter_launcher_icons:main
87    flutter_icons:
88       android: "launcher_icon"
89       ios: true
90       image_path: "assets/icon.png"         AldyYuan, a w
```

. And then run flutter pub get, and run flutter pub run flutter_launcher_icons:main in terminal root project.

For the splash im using this package https://pub.dev/packages/flutter_native_splash , change the color: and image: in this line of code:

```
91
92    flutter_native_splash:
93       # This package generates native code to customize Flutter's default white native splash screen
94       # with background color and splash image.
95       # Customize the parameters below, and run the following command in the terminal:
96       # flutter pub run flutter_native_splash:create
97       # To restore Flutter's default white splash screen, run the following command in the terminal:
98       # flutter pub run flutter_native_splash:remove
99
100      # color or background_image is the only required parameter.  Use color to set the background
101      # of your splash screen to a solid color.  Use background_image to set the background of your
102      # splash screen to a png image.  This is useful for gradients. The image will be stretch to the
103      # size of the app. Only one parameter can be used, color and background_image cannot both be set.
104      color: "#2196F3"
105      #background_image: "assets/background.png"
106
107      # Optional parameters are listed below.  To enable a parameter, uncomment the line by removing    AldyYuan
108      # the leading # character.
109
110      # The image parameter allows you to specify an image used in the splash screen.  It must be a
111      # png file.
112      image: assets/icon-splash.png
113
```

And then run flutter pub get, and run flutter pub run flutter_native_splash:create in terminal root project.

Change App Theme Color

Open lib/utils/app_theme.dart . Most of this color are used, so just change the value of it, if you delete one there will be an error, but if you know what you're going to do feel free to change or delete the variabel.

```
     AldyYuan, 4 days ago | 1 author (AldyYuan)
 3   class AppTheme {
 4     static const Color primaryColor = Color(0xFF2194F3);
 5     static const Color lighterPrimaryColor = Color(0xFF6eC4FF);
 6     static const Color darkerPrimaryColor = Color(0xFF0067C0);
 7
 8     static const Color secondaryColor = Color(0xFF5EFC8D);
 9     static const Color lighterSecondaryColor = Color(0xFF98FFBE);
10     static const Color darkerSecondaryColor = Color(0xFF00BDAD);
11
12     static const Color warningColor = Color(0xFFF27F21);        AldyYuan, 4 days ago • Change Theme
13     static const Color dangerColor = Color(0xFFA30000);
14
15     // This use for PDFColor
16     static const int primaryInt = 0xFF2194F3;
17   }
18
```

Adding more doctor specialist

There are few line of code you need to change:

1. Lib/page/auth/register_doctor.dart, you can remove or adding new value

```
16     List<String> specialist = [
17       "General practitioners",
18       "Surgeon",
19   💡  "Dentist",        AldyYuan, a week
20     ];
```

2. Lib/page/doctor/edit_doctor_profile.dart, you can remove or adding new value

```
21     List<String> specialist = [
22       "General practitioners",
23       "Surgeon",
24       "Dentist",
25     ];        AldyYuan, 2 weeks ag
```

3. Lib/page/user/main_page.dart, you need to add more widget _buildDoctorSpecialist(Specialist: 'Specialist', imgAsset: 'Icon from asset'),

```
140                    Container(
141                      height: 140,
142                      child: SingleChildScrollView(
143                        scrollDirection: Axis.horizontal,
144                        child: Row(
145                          children: [
146                            _buildDoctorSpecialist(
147                              specialist: "General practitioners",
148                              imgAsset: 'assets/general_practitioners.png',
149                            ),
150                            _buildDoctorSpecialist(
151                              specialist: "Surgeon",
152                              imgAsset: 'assets/surgeon.png',
153                            ),
154                            _buildDoctorSpecialist(
155                              specialist: "Dentist",
156                              imgAsset: 'assets/dentist.png',
157                            ),
158                          ],
159                        ),
160                      ),
161                    ),
```
